

Note to assessor:

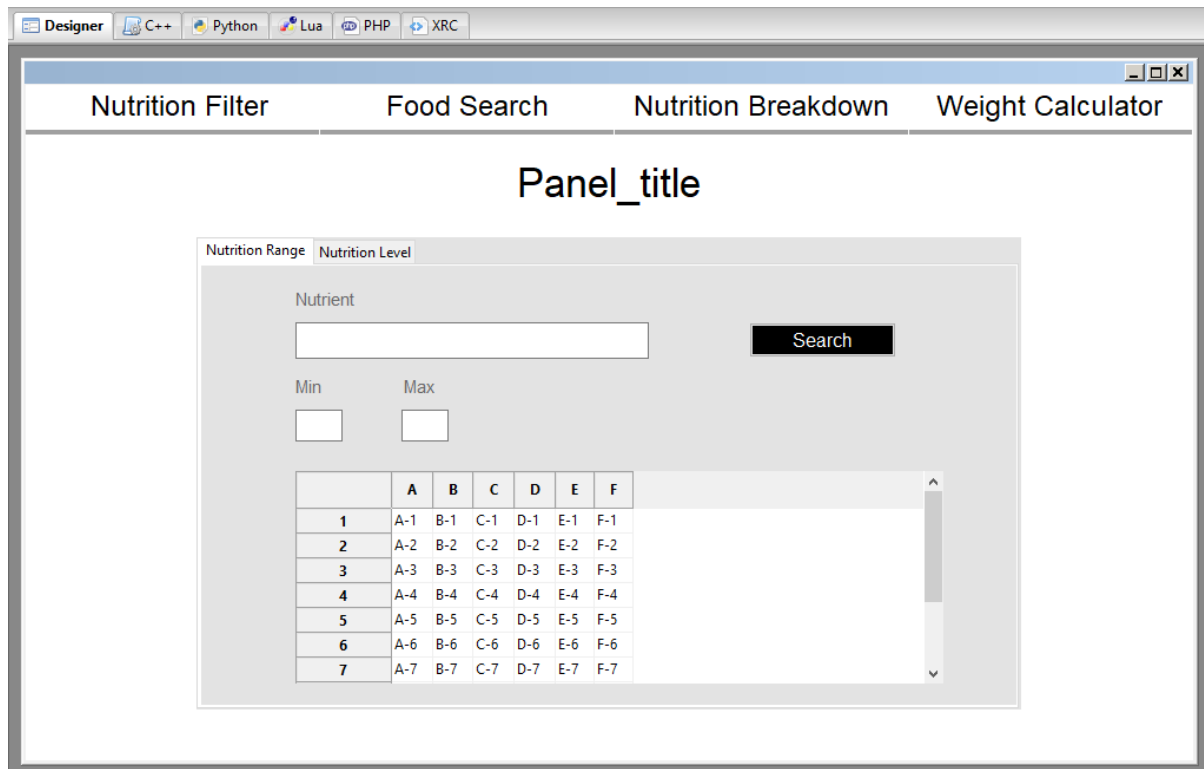

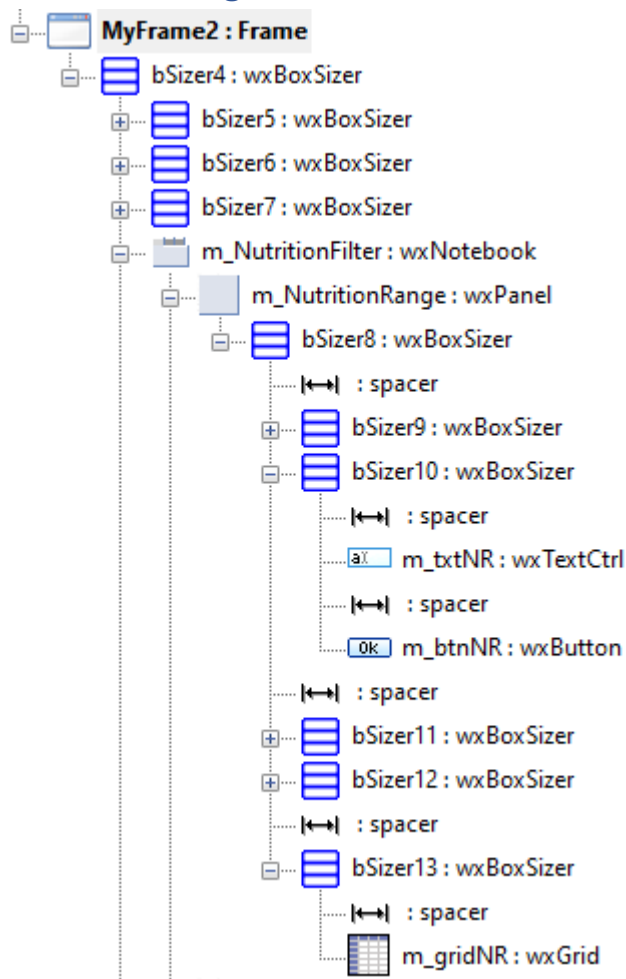

This program is designed with custom GUI functions that aren't fully usable on the GUI.fbp file. The top labels are coded in run_app.py to open the relevant panels for each function while hiding the former one. The title below the top bar will also change based on the current feature open in the form (instead of the placeholder Panel_Title).

For the purposes of this document the relevant image of the panels will be revealed to show its structure.
